- 1. off RH Side Grille
- 2. off Push Rivets
- 4. off Spring Grip Clips

**Tools Required**

- 5.0 mm Drill
- Masking Tape
- Pliers

**Rear Grille Fitting Instructions**

1. Using Masking Tape protect painted body work around the area where the grilles are to be fitted.
2. Trial Locate the new mesh grilles to the apertures, making sure they are central in vertical and horizontal. (Practice locating the parts they are a close fit)
3. While the grille is in place mark the position of the lower brackets onto the masking tape to give the position for fitting the spring clips.
4. Remove the grille and push the grip clips onto the bumper inline with the marked positions.
5. Replace the grille to the aperture.
6. With the grille tilted slightly backwards push the lower brackets between the grip clips and the bumper until the click into position.
7. Line up the mesh grille so that it looks even around the spot lamp, then drill through the upper bracket into the bumper with a 5mm drill. (You may need small pliers to help pull the top of the grill forward at the corners)
8. Insert a push rivet and push the pin into the rivet until it is fully home.
9. Repeat on the other side and your grilles are now complete.
